DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-10 are rejected under 35 U.S.C. § 103 as being unpatentable over Bernshtein et al (reference is cited in parent application).

4. The reference discloses the features substantially as claimed. The disclosed features include hot rolling, cutting, quenching, tempering, and cooling. The features relied upon described above can be found in the reference at abstract. The difference between the reference(s) and the claims are as follows: the cited reference does not disclose steps of arranging and removing cut pieces in the furnace. But, it is contemplated within ordinary skill artisan to arrange cut pieces in the furnace for

better heat transfer and remove heat treated cut pieces from the furnace after heat treatment. In re Venner, 120 USPQ 193 (CCPA 1958) With respect to the heat treatment conditions that it is within ordinary skill artisan because the heat treatment conditions are materials dependent. Moreover, it is well settled that method or process is an act or a series of acts and from the standpoint of patentability must distinguish over prior art in terms of steps. Ex parte Forsyth and Hancher, 151 USPQ 55, 55.

5. The claimed quenching temperature and tempering time are considered conventional because they are material dependent. It is contemplated within ambit of ordinary skill artisan to use the conventional heat treatment conditions based on the materials.

Conclusion

6. The above rejection relies on the reference(s) for all the teachings expressed in the text(s) of the references and/or one of ordinary skill in the metallurgical art would have reasonably understood or implied from the text(s) of the reference(s). To emphasize certain aspect(s) of the prior art, only specific portion(s) of the text(s) have been pointed out. Each reference as a whole should be reviewed in responding to the rejection, since other sections of the same reference and/or various combination of the cited references may be relied on in future rejection(s) in view of amendment(s).

All recited limitations in the instant claims have been met by the rejections as set forth above.

Applicant is reminded that when amendment and/or revision is required,
